

AHT & Idle Rate Performance Framework

How performance is defined, coached, and escalated on AHT and Idle Rate

01 PURPOSE

This framework defines what “good” looks like for AHT and Idle Rate, what action each performance tier triggers, and the escalation path for sustained underperformance — so coaching decisions are consistent across Team Leads rather than case-by-case judgment calls.

02 PERFORMANCE TIERS

TIER	AHT (APPEALS)	IDLE RATE	WHAT IT MEANS
Needs Improvement	> 5.0 min	> 10%	Sustained gap against target; requires a coaching conversation this week
Meets Expectation	3.1 – 5.0 min	3% – 10%	At or near target; monitor as part of normal weekly review
Exceeds Expectation	< 3.1 min	< 3%	Consistently ahead of target; candidate for recognition or SME track

03 METRIC → ACTION MAPPING

Coaching is triggered by pattern, not a single bad day — so the mapping below is based on sustained trend, not one-off spikes.

TRIGGER	ACTION	OWNER
AHT above target for 1 week	Deep dive with Specialist(Moderator)	Team Lead
AHT above target for 3 consecutive weeks	1:1 coaching conversation	Team Lead
Idle Rate > 10% for 2 consecutive weeks	Review idle-flagged sessions together; identify specific cause	Team Lead
No improvement after coaching conversation (week 4)	Documented improvement plan with specific targets and check-in date	Team Lead + PM

04 ESCALATION PATH FOR REPEATED UNDERPERFORMANCE

STAGE	ACTION	TIMEFRAME
Stage 1	Informal coaching conversation; specific, written follow-up in 1:1 notes	Week of trigger
Stage 2	Documented improvement plan: target metric, timeline, support offered (shadowing, refresher training)	+2 weeks, if no change
Stage 3	Formal performance improvement plan (PIP), reviewed with PM and HRBP	+2 weeks, if no change
Stage 4	Formal review of role fit with HRBP and department lead	End of PIP period

Each stage is documented in writing before moving to the next, and coaching support is offered at every stage, not just at sign-off.

Note: this document has been recreated with generic detail for portfolio purposes. It reflects the structure and thresholds of a framework I used in practice; specific figures have been adjusted for sample use.
